Screen's EQUIOS-Pre4m Jet520 Link builds a bridge from Trueflow to Truepress Jet520 for seamless digital printing

Screen's EQUIOS-Pre4m Jet520 Link is the latest advance that further establishes Trueflow's seamless connection with digital printing

Screen has introduced EQUIOS-Pre4m Jet520 Link into its EQUIOSNET single universal production environment. The link will form a bridge between the Trueflow workflow and the Truepress Jet520 full-colour, variable inkjet printing system.

EQUIOS-Pre4m Jet520 Link is part of a new workflow that offers the kind of integrated and coordinated management of multiple different devices that users need today. It brings the user-friendly, stress-free interface of the Trueflow SE CTP workflow and links it seamlessly with the Truepress Jet520, providing the same operation feel as CTP output.

The same job can now be sent to CTP or print-on-demand (POD) devices from the same environment using optimized output instructions. The Truepress Jet520 can take advantage of EQUIOS-Pre4m's powerful and intuitive imposition function for smooth, reliable linking to postpress equipment, giving a total end-to-end solution. This solution will be ideal for book, journal and manual printers as it allows for the complicated 2 up, 3 up and 4 up impositions that enable printers to take full advantage of various inline finishing options that are now available.

The Truepress Jet520 is a continuous-feed, single-pass inkjet printer which meets the growing demand for high-quality, high-speed, variable data digital printing. At speeds up to 1680 colour impressions, or 128 metres per minute, at a maximum printing width of 507mm, the Truepress Jet520 operates at a production level suitable for high-volume transactional and direct mail printing. The quality of the Truepress Jet520 means that it is capable of producing all the work that has traditionally been printed offset.

"The new universal workflow environment of EQUIOSNET features all the capabilities required for integrated CTP and digital print production, complete with variable data and personalized print facilities," says Sjaak Veeken, Product Manager Workflow at Screen Europe. "The EQUIOS-Pre4m Jet520 Link continues the tradition of output quality and consistency our users have come to expect of our CTP equipment, translated seamlessly to POD."
